Profile

Newly graduated software developer from NBI Handelsakademin in Gothenburg with broad experience in fullstack development using C#/.NET 8, React/TypeScript and Python. Completed two internships (LIA) in production environments and currently building several personal projects — from a live vocabulary trainer to a Celery monitoring tool in Python and a native Android app in Kotlin. Consistently applies Clean Architecture, CQRS and testable code practices. Thrives in teams, takes ownership of individual modules and delivers clean, well-documented code.

Projects

ClubSite – Website for Bohus Taekwon-Do – *private, launching soon*

- Fullstack project with separate repos: ClubSite-BE (.NET 8, Clean Architecture, JWT, Supabase/PostgreSQL) and ClubSite-FE (React, TypeScript, Vite, Tailwind CSS).
- Admin panel with role-based authentication, news management and member view – deployed via Vercel.
- Planned AI chatbot integration via Anthropic API for visitor support.

AsyncGuard – Intelligent failure recovery for Celery tasks – *private, in progress*

- SaaS tool that automatically detects task dependencies in Celery, visualises failure chains and offers one-click recovery.
- Backend: Python 3.13, FastAPI, SQLAlchemy, PostgreSQL. Frontend: React 18, D3.js, Tailwind CSS. Infrastructure: Redis, Docker Compose, AWS.
- SDK with Celery hooks (before_start, on_failure, on_retry, on_success) that instruments existing apps with minimal overhead.
- Slack integration for automatic failure notifications and recovery confirmations.

CMS-Platform – Headless CMS for website builders – *private, in progress*

- Next.js/TypeScript-based headless CMS with dynamic routing and Supabase as the database.
- Handles dynamic slug and language routes in the same structure – hands-on experience with Next.js App Router and server components.

PersonalAgent – Personal AI assistant – *private*

- Telegram bot built with Node.js, Telegraf and the Anthropic SDK (Claude API).
- Allowlist-based authentication and conversation memory – automates daily tasks via natural language.

Clarity – Habit Tracker for Android – *private, in progress*

- Native Android app in Kotlin – a modern habit tracker focused on simplicity and daily use.
- First project in Android/Kotlin – demonstrates breadth beyond the .NET/Web stack.

Gym Booking System – Booking system for gym classes

- REST API built with Clean Architecture – from console application to a complete API solution.
- Role-based JWT authentication (member, admin, owner) with protected endpoints.
- Entity Framework Core with soft delete, repository pattern and Bogus for test data seeding.

HabitTracker2 – Fullstack app for daily habits

- Fullstack app with Clean Architecture: separate layers for API, Application, Domain and Infrastructure.
- CQRS with MediatR, AutoMapper, FluentValidation and JWT authentication.
- PostgreSQL via Supabase and Entity Framework Core; environment variables for secure configuration.

Glossary Trainer – Live vocabulary trainer – *glossarytraining.se*

- Live service at glossarytraining.se – flashcards and quiz built with HTML, CSS and vanilla JavaScript.
- Support for custom word lists with JSON export/import and offline mode.

NutriSpec – Nutritional analysis tool – *contribution during internship*

- Contributed to NutriSpec (nutrispec.tmylife.se) at TMY Life / NutriWize – a web-based tool for nutritional data and recipe analysis.
- Integrated data from USDA and the Swedish Food Agency to build recipes, calculate nutritional values and visualise macronutrients.

Internships (LIA)

LIA 2 – Software Developer (.NET / Fullstack) – [InfinetCode AB](#) | *Gothenburg* | *March 2026 – June 2026*

- Worked in an agile team of 6 developers and 2 team leads on Dojo Course Platform – a fullstack e-learning platform.
- Implemented features end-to-end: empty state handling (issue #116), improved error handling (issue #118) and API versioning (issue #30).
- Stack: .NET 8 backend (Clean Architecture, JWT) + Next.js/React/TypeScript frontend.
- Diagnosed and resolved local environment issues: CORS misconfiguration, SSL certificate errors, startup crash on empty Tokens section and missing SendGrid key.
- Used Git, pull requests and code review as part of a structured team workflow.

LIA 1 – Software Developer (Python / Backend) – [TMY Life / NutriWize](#) | *Gothenburg / remote* | *September 2025 – November 2025*

- Contributed to backend development in Python with FastAPI to expose REST APIs for food and nutritional data.
- Imported and processed large CSV datasets from USDA and the Swedish Food Agency, mapping them to a shared data model.
- Worked with SQL-based databases via SQLAlchemy, including table modelling and queries.
- Documented API endpoints in Markdown and followed Clean Architecture principles with separated layers.
- Used Git and GitHub for version control, branching strategy and CI via GitHub Actions.

Technical Skills

Languages & frameworks: C#, .NET 8, ASP.NET Core · Python, FastAPI · JavaScript/TypeScript · React, Next.js, Tailwind CSS · Kotlin (Android) · HTML5, CSS3

Tools & technologies: Entity Framework Core · MediatR, AutoMapper, FluentValidation · JWT authentication · Docker, Docker Compose · Redis · D3.js · Swagger/OpenAPI · xUnit · Git, GitHub Actions · Anthropic SDK · Telegraf

Databases: PostgreSQL (Supabase) · SQL Server / SQL Express · SQLite · T-SQL, LINQ · SQLAlchemy

Deployment & cloud: Vercel · AWS (planned) · GitHub Pages · GitHub Actions CI/CD

Practices: Clean Architecture · CQRS · OOP · TDD · Agile / Scrum · Pull requests & code review

Work Experience

Professional Driver – [GB Framåt Transport AB](#) | *Gothenburg* | *August 2006 – present (part-time)*

- Responsible and punctual driver with 18+ years of experience in logistics and customer relations.
- Trained to handle time pressure, take individual responsibility and communicate professionally – qualities I bring directly into software development.

Education

Software Developer .NET – [NBI Handelsakademin](#) | *Gothenburg* | *September 2024 – June 2026* | *Graduated June 2026*

Vocational higher education programme focused on backend development with C# and ASP.NET Core. Emphasis on SQL Server, cloud integration (Azure), test-driven development, agile practices and working in development teams. Strong focus on Clean Code, design patterns and modern architectural principles.
